

James Routh, CISM
Chief Information Security Officer
The Depository Trust & Clearing Corporation

Jim Routh has over 20 years of experience in information technology and information security as a practitioner, management consultant and leader of technology functions and information security functions for global financial service firms. Jim designed and implemented an enterprise wide information security program for the Depository Trust and Clearing Corporation (DTCC) based on risk management best practice, COBIT and ISO 27001 standards. He implemented an information security risk assessment process and an innovative security program for application development and vendor management. Prior to joining DTCC he was the first CISO for American Express and responsible for the implementation of an enterprise wide implementation of GLBA specific controls and practices for two different banking entities in North America. Prior to that, he led a customer information management function within Risk Management for the US card businesses for American Express. Prior to that he led the information technology function for the Institutional Services and Investment Management businesses for American Express Financial Advisors. Mr. Routh was a management consultant in information technology for dozens of leading financial service firms for over 12 years.
